FIBRAIN is the leading Polish manufacturer in the fields of ICT systems, fiber optics, and photonics technology. Our technological facilities include 4 Fiber Optic Manufacturing Centers, which provide a complete product and system portfolio used to build fiber optic networks in all current technologies. Furthermore, we have our own R&D departments and laboratories, which allow us to improve our product portfolio according to customer requirements.

ML Inc. is the US-Subsidiary of ML System S.A. a highly specialized technology company with its own production plant and a strong R&D department. It develops, manufactures and implements solar products basing on own technologies that are the perfect response to the current needs of the green energy transformation.

The main products targeted at the US market are: aluminum unitized facades (both curtain wall and window wall systems) with our active fully transparent IGU, producing electricity (quantum-dot layer technology) opaque spandrels and slab covers with glass-glass PV modules, rain coat cladding based on Photonwall (nature-inspired, aesthetic photovoltaic panels), roof skylights with active technologies and NoFrost feature and active handrail and balcony glass.

Polimarky, a family-owned Polish company with 40 years of experience, specializes in high-tech installation systems for water supply, heating, and surface heating. Their products, made from PP and PE, are durable and cost-efficient. With a lifespan of over 50 years, their systems offer chemical resistance, low thermal conductivity, and hygienic properties, making them perfect for residential and industrial projects, replacing their metal counterparts. Pipes can be modified to achieve fire-resistant capabilities, ensuring safety, especially in drywall applications.
